Authorized Summary

Project P76 on the BESA seal of approval at EMF in the electric vehicle “Quantum Upgrade”

The BESA tests carried out by IFVBESA on the energetic and physical effectiveness of the test object "Quantum Upgrade", have clearly shown that this test object is able to neutralize or harmonize biologically significant stress factors from EMF in the electric vehicle (E-Car) such as WLAN, Bluetooth, 3G, two connected smartphones of the generations 4G and 5G as well as transmission masts at the acupuncture points of the test persons. Via the bioenergy-informative system analysis, the effect of the above-mentioned stress factors on the test persons, their meridian systems, and their energy-informative-biological control circuits was questioned and systemically tested on the energy-informative level. The BESA BEFORE - AFTER tests show significant changes at the tested acupuncture points at the meridian system of the test person. The measurement data, as well as their key figures, confirm, on the one hand, the stresses caused by the tested factors on the human organism and clarify, on the other hand, how after the application of the test object "Quantum Upgrade," the deregulating energies are transformed into body-immanent and biocompatible energies.

From a holistic point of view, it may be assumed that the positive effect on the test subjects also occurs in other people. That the positive influence of the "Quantum Upgrade" is actually possible with high precision is clearly shown by these tests through the BESA-BEFORE-AFTER comparison with the test persons. All measured values improved significantly from the mostly 100 percent blue or red measuring range into the green, mostly 50 sct. range (sct = scale value), i.e., the range of optimal measured values.

RESULT: Subjects were associated with severe EMF in an electric vehicle during each of the BESA AFTER tests. In contrast to the BESA BEFORE tests, in which the test object "Quantum Upgrade" was not used, positive measurement results were found throughout, indicating that neutralization or harmonization had taken place. This means the regulation dynamics developed into an optimal effective range.

By demonstrating the energy informative effectiveness of the test object "Quantum Upgrade" against EMF on the test subjects in this project P76, the requirements for obtaining the BESA seal of approval with 5 stars by the International Professional Association for BESA were met.
